

Dear Home Building Professional:

The Home Builders Associations of Northeast Ohio have formed a unique partnership and are proud to offer a voluntary residential green building program called the Northeast Ohio Green Building Initiative to members and consumers.

The program, based on the National Association of Home Builder's (NAHB) Model Green Home Building Guidelines, will help builders develop more energy efficient and environmentally-friendly homes by providing them with green home building guidelines and other resources.

An emerging industry trend gaining popularity nationwide, green building will significantly affect home building and buying in Northeast Ohio. Considering the rising prices of natural resources - now is the time to consider steps toward reducing energy bills.

This innovative program is the first of its kind in Ohio and our Associations are excited about the opportunity to provide our members with the necessary tools to build and market green homes to their consumers.

If you have any more questions please contact me at 216.225.1141 or rfanajr@gmail.com for more information.

Thank you for your interest in the Northeast Ohio Green Building Initiative.

Sincerely,

Rocco Fana, Jr.
Program Manager
